

Adventure Works Sales Dashboard

Name: Goji Seth Gabe

Course: Data Analysis

Date: 5 June 2026

Figure 1: Adventure Works Sales Dashboard

Insights and Analysis

1. KPIs - Overall Business Performance

The dashboard shows Total Sales of \$9.19M, Total Quantity 45K units, Total Cost \$5.30M, Total Profit \$3.89M, and Total Orders 12K. The profit margin is 42.3%, indicating the business is profitable with good cost control.

Recommendation: Maintain current pricing strategy but negotiate better supplier rates to increase margin above 45%.

2. Monthly Sales Distribution

The "Total Sales by Month" chart shows extreme seasonality. January had a massive spike of ~\$5.5M, while Feb-Dec stayed flat at ~\$0.4M per month. This means sales depend on one-off events, not steady demand.

Recommendation: Investigate January's spike - likely a bulk/corporate order - and create a yearly campaign to replicate it in Q2/Q3.

3. Daily Revenue Distribution

Daily revenue fluctuates heavily with multiple peaks in Jan and smaller spikes through the year. Most days have low sales under \$50K, showing inconsistent daily performance.

Recommendation: Analyze what drove peak days - promotions, weekends, or stock arrivals - and schedule marketing on historically low days to balance revenue.

4. Top 5 Products by Total Orders

Water, Patch Kit, Mountain, Sport, and Road are the top 5 products by orders. Water leads with ~1200 orders, proving it's a high-volume, fast-moving product.

Recommendation: Keep Water and Patch Kit in stock always. Use them as entry products to cross-sell higher-margin bikes.

5. Bottom 5 Products by Total Orders

Mountain 500 SL, Mountain 500 BL, Touring 1000 ML, Touring 1000 BL, and Mountain 500 SL again are the bottom 5 with only 21-26 orders each. Touring models and older Mountain bikes sell worst.

Recommendation: Discontinue Touring 1000 series or rebrand it. Run clearance discounts to clear existing stock and free warehouse space.

6. Country by Orders, Revenue & Profit

The clustered bar chart shows United States dominates in orders, revenue, and profit. Other countries contribute very little. Profit trend matches sales trend, so no country has abnormal costs.

Recommendation: Increase marketing spend in US to defend market share. Test local partnerships and pricing in other countries to unlock growth.

7. Most Profitable Product

Mountain-200 Black is the most profitable product at \$236,765.34 profit. Even though Water sells more units, Mountain-200 generates higher profit per unit.

Recommendation: Shift production and sales focus to Mountain-200 series. Train sales team to push this high-margin product.

8. Use of Slicers for Interactivity

Order Date and Country slicers allow filtering the whole dashboard. Selecting US or specific months updates all KPIs and charts instantly, helping management compare scenarios.

Recommendation: Use slicers in monthly review meetings to track if campaigns improved specific regions or time periods.

Conclusion

The dashboard successfully answers all business questions. Adventure Works is profitable but faces 3 risks: 1) Over-reliance on January sales, 2) Poor performance of Touring models, 3) Heavy dependence on US market. Future strategy should focus on reducing seasonality, promoting Mountain-200, and expanding internationally.
